mongoDB

December 1, 2020

Dear Recruiter,

My complete work experience till now revolves around the Full Stack development position and it makes me an ideal candidate if not perfect because I am flexible working with both front-end and back-end. I had been looking for mongoDB openings for a long time and finally got it on LinkedIn. I have used mongoDB for almost all my projects and believe me, that is the reason why I am applying for an opportunity here.

I have worked on almost a dozen projects now. Initially started as a bug solver, but within a month I was promoted to a Full Stack Developer role. As we work with extremely strict deadlines, that has helped my pace up my development time. My preferred Stack is MEAN/MERN as we heavily rely on Javascript for all the projects. Along with Full Stack development, my domain includes developing cross-platform mobile applications using React Native and Ionic Framework.

I can definitely be a great match for the role. I get along with my team members really well and learn from everyone. It would be a "dream come true" moment for me if I can join mongoDB as a Software Engineer.

Looking forward to your response and hopefully an interview. It would be fantastic if I get an opportunity to work with great people and learn from them as well.

Thank you for your precious time and attention.

Sincerely,

Rajendra Dhami
